

Shot Timer System

Shot Timer System

General Description:

The Shot Timer is designed for allowing the operator to dispense a preset amount of adhesive based on time. Adjusting the time and flow rate of your dispense system guarantees a consistent "shot" size or adhesive weight, this preset feature is used on each part and takes the operator out of the equation. The shot timers will work with any adhesive open time and can be used with any of our standard dispensing equipment

Operation:

The operator actuates the trigger to open the gun and the shot timer closes the gun, giving you a repeatable and controlled shot of adhesive. Shot timer resets after each dispensing cycle. The timer is adjustable to give you an infinite number of shot sizes. The Auto/Man selector switch allows the operator to bypass the shot timer to lay down continuous beads of adhesive if required.

System Options:

- Steel base frame with purge holster
- Shot Timer
- On/Off Selector switch
- Auto/Man Selector switch
- Control valve with filter lubricator
- Control enclosure mounted to the frame with all the components mounted and wired
- Standard 15 ft. long Power cord
- Comes with enough cable to mount the stand up to 20' away from the dispense unit.
