

M-1275 Coupon Press

Adhesive Curing Systems

M-1275 Coupon Press

General Description:

Used to simulate the exact parameters found in heated bond fixtures, the Model 1275 provides more accuracy and repeatability than manual pressing and oven curing. Fully automatic controls allow the operator to select platen temperature, force, and cure time then load the coupon or plaque into the fixture using adjustable support bars. Holding the start button until the platen closes actuates the timer, the press opens automatically when the specified cure time has been reached. This system is a bench top style unit with 120 volt plug in; other options available upon request.

Features:

- Individual temperature control for top and bottom plattens
- Automatic timer controls cure times
- Separate controls adjust platten pressures from 15 to 350 pounds of force
- Teflon® coated plattens clean up easily
- lightweight and portable with aluminum framework

Specifications:

- 16" x 16" x 24"
- Platten area 2" x 13"
- Requires: 90 psi air supply
- 120 Volts A.C. 10 amp current
