

Conditioned and Non-Conditioned Headers

Conditioned and Non-Conditioned Headers

General Description:

Header supply systems are used when multiple dispensing systems are involved or when it is physically impossible to fit the supply next to the dispensing systems. Header supply systems can be as simple as a few feet of black pipe or as intricate as a thousand feet of header supply with temperature controlled, welded systems mounted overhead in your plant. Whatever your need is, you can be sure that EMC² has the experience to design your header supply system requirements.

Features and Options:

- Centralize storage and supply area
- Allows you to maximize floor space
- Feeds multiple locations
- Welded or threaded pipe
- Manual and Robotic systems
- Heating and cooling
- Monitoring controls with zones
- Low and high pressure design
- Fully insulated for maximum efficiency
- Quality hoses and controls
- Production proven systems
