

Temperature Conditioning Systems

Temperature Conditioning Systems

General Description:

With efficient heating and cooling methods, EMC² can provide systems designed to control and maintain proper material temperatures, allowing your adhesive and the dispensing equipment to operate at their peak performance year round. We've designed a versatile array of options to provide you with maximum performance, control and access to your material and pumping system. EMC² can help you centralize your storage/supply and dispensing operations by designing temperature controlled header systems, rooms and conditioning systems. This maximizes floor space and gives you better quality and process control.

Temperature controlled room

Features and Options:

- Custom sizes and shapes
- Durable sheet metal construction/insulated
- Access Doors, Hinged or Sliding
- Heat-Pump control (Heating and Cooling)
- Digital monitoring controls with alarms
- Rooms Designed for transfer pumps, drums or totes
- Bulkhead connections
- Booms to support hoses and guns

Material conditioning systems

Features and Options:

- Bi-temp heating and cooling units
- Drums and Totes
- Single system or header supply systems
- Material heat exchangers
- Conditioning Hoses
- Temperature Monitoring
- Drum conditioners
