

# Dispensing Valves

## M-4000B Series Dispense Valves

Utilizing standard components wherever possible, this versatile series of 2-way valves is one of the most dependable valves on the market today. Designed and built by EMC<sup>2</sup>, this valve was tested and retested to insure long life, low maintenance and reliability.

The 4000 series valve comes in a variety of sizes and flow rates to meet all of your requirements. Standard port sizes range from #6 SAE to #12 SAE. The "divorced" design allows the visual inspection of open/closed function and prevents material leaks from affecting the air actuator and other air components upstream of the valve.
