

Press Automation

Robot Loaders & Unloaders

EMC² has been involved in robotic loading and unloading of SMC presses for the past 15 years. During this time EMC has designed systems to load or pick up almost every type of part imaginable. Robots can be floor mounted, mounted on rails or hung from the press structure to eliminate floor space issues. Secondary equipment, like load stations and unload nests, can be built in to allow operators to load and unload components safely while the robot is working. Safety guarding, light curtains and controls are all designed to make the system as reliable and safe as possible.

Automated Loaders & Unloaders

EMC² has been involved in automatic loading and unloading of SMC presses for the past 15. During this time EMC² has designed systems to load or pick up almost every type of part imaginable. Automation can be all electric or servo-driven hydraulic, can be floor mounted, mounted on rails or hung from the press structure to eliminate floor space issues. Secondary equipment like load stations and unload nests can be built in to allow operators to load and unload components safely while the robot is working. Safety guarding, light curtains and controls are all designed to make the system as reliable and safe as possible.
